Wireless Access at the Kennedy Senior Center
## 2005-05-01

The SSID is "KSCNM"

The Network Authentication is WPA-PSK.

The type of encryption is TKIP.

See an MCC staff member for the Network key value.

For Windows XP, Service Pack 2 (SP2), insert your wireless card, Go to the Control Panel, double click "Network Connections", right-click the Wireless Network icon and then select "Properties" Select the "Wireless Networks" Tab on the top, Select the KSCNM entry in the list (it should have been auto-detected) and click the "Properties" button under that list. Set up that window to look like the following:

If you don't have Windows XP SP2, then consult the manufacturer of your network card for an updated driver that may have WPA support.
